No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     12. | SIDSI/gcddata/geneseq_geneseq_embl/Nal981.DAT:

Isolated nucleic acid having expression vector construct with vascular endothelial growth factor-2 insert, useful for treating chronic limb ischaemia or myocardial ischaemia, autoimmune disorders and allergic conditions

Disclosure, Fig 31; 241pp; English

The invention relates to an isolated nucleic acid comprising pVGI.1 factor 2 (VGF-2) insert. The nucleic acid is useful rendothelial growth factor 2 (VGF-2) insert. The nucleic acid is useful for producing a host cell by transducing, transforming or transfecting a host cell with the DNA and for treating a patient having chronic limb ischaemia or myocardial ischaemia, or a disorder selected from autoimmune disorders (e.g. rheumatoid arthritis, dermatitis), allergic reactions or conditions (e.g. asthma), organ rejection, inflammatory conditions (e.g. conditions), organ rejection, inflammatory conditions (e.g. disorders (e.g. Gaucher's disease), disease), diseases (e.g. cardiomyopathy), arthythmia, heart valve diseases, aneurymms, arterial occlusive disorders and embolism. This sequence represents the pVGI.1 expression vector containing the VEGF-2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3662
of alpha-amylase linked to a cellulose binding domain (CBD). The CBD is selected from the Bacillus or cellulomonas endoglucanase, C. xylanase A or the Humicola insolens BdV sequence. The starch is liquefied by treating, in aqueous medium, with such an enzyme hybrid. A recombinant expression vector comprising a construct containing isolated DNA encoding enzyme hybrids with amylolytic activity, promoter and stop signals can be used to transform host cells for the production of the recombinant enzyme hybrids are useful in industrial starch processing affinity for the production of sweeteners. Hybrid enzymes have altered affinity for substrate and increased activity, resulting in at least 1 of reduced calcium ion dependence, reduced formation of Maillard reaction products and reduced effect of alpha-amylase on subsequent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TTCCATAGGCTCCGCCCCCCTGACGAGCATCACAAAATCGACGCTCAAGTCAGAGGTGG

the origin of replication and replication start of promoter and coding sequence for tn9 kanamyci phrompter and coding sequence for tn9 kanamyci phosphotransferase. The plasmid was synthesis pacification describes a method for the synthemeter double-stranded polynucleotides. The generating a first set of oligonucleotides. The generating a first set of oligonucleotides. The method can be used for preparing polynuclinvolved in a biochemical pathway. In particul produce polynucleotides encoding enzymes, e.g. produces, polynucleotides encoding enzymes, e.g. prompter set, phosphofructokinaee-1, aldolase, beglyceraldehyde-3-phosphate dehydrogenase, phophosphogroglycerate mutuse, enclase or pyruvate also be used for the preparation of viral par and artificial genetic systems. 3847 ATGCGCGGATAGCCGCTGCTGGTTTCCTGGATG Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides a novel method for directing self-assembly of a gene having three or more fragments in a directionally and spatially cordered fashion to produce a gene or a gene vector. The method involves usage of primers, containing class IIS restriction endonuclease recognition sites, for isolation of these fragments. As described in the disclosure, the method may also use a vector for the incorporation and screening of endogenous mouse promoter elements for the identification of cell specific promoters. In the example given, plasmids pak.CMV (AAV33625) and pVLOVDGH-900 (AAV33621) were used as templates from which six fragments were amplified. Each of the fragments contained different regulatory sequences. The six PCR fragments were designed to self-assemble into a retro-vector using the method of the invention. The present sequence, designated as GRNSA 981, represents the monomeric DNA sequence of the six ligated fragments. In general, the method is claimed to be useful for

prising the PCV Rep gene.

ene, gene function, Geminivirus, CV; ss.

circle replication in host, comprises Rep gene, sequences open reading frame encoding

ucleotide that is capable of rolling ryotic host. The polymucleotide a virus, sequences that are cis on p protein can bring about RCR of the certain an bring about RCR of the me encoding a protein of interest to set, and optionally a multiple genera of family Geminivizidae, ynucleotide sequence is useful for nest neukaryotic cell, for nest neukaryotic cell, for hes texaryotic cell, for that gene, as gene sequence delivery that gene, as gene sequence delivery that gene, as gene sequence delivery that gene products to organisms nics. The present sequence represents mics. The present sequence represents nics. The present sequence corganisms and control of the own promoter, and instead by insertion of the bacterial

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3561 AAGAACAGTATTTGGTATCTGCGCTCTGCAGTGAAGCCAGTTACCTTCGGAAAAAAAGTTGG 3620
                                       The invention provides a novel method for directing self-assembly of a gene having three or more fragments in a directionally and spatially ordered fashion to produce a gene vector. The method involves usage of primers, containing class IIS restriction endomuclease recognition sites, for isolation of these fragments. As described in the disclosure, the method may also use a vector for the incorporation and screening of endogenous mouse promoter elements for the incorporation and screening of endogenous mouse promoters. In the example given, plasmid VLSNO2, containing a circularily permuted mouse VL30 genome, was used in the construction of single long terminal repeat (LTR) vectors used in the method of the invention. In general, the method is claimed useful for isolating and identifying regulatory sequences from a cell, including those for enhanced biological activity, or tissue-specific, hormone-specific or developmental-specific gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1885 GAGGTATGTAGGCGGTGCTACAGAGTTCTTGAAGTGGTGGCCTAACTACGGCTACGCTACACTAG

```
cc of the female animal prior to or during gestation of the offspring under conditions where the nucleotide sequence is expressed. The coreasing suseful of improving or enhancing animal growth, for increasing growth hormone, lean body mass, IGP-I levels, feed efficiency, growth rate, ratio of somatorrophs to other commone-producing cells in a pituitary gland, and milk production in a confesping, and for delaying birth of an offspring, GRRH nuclear casis and vectors are used for diagnostic purposes in clinical endicine, both human and veterinary, eg. in treating growth-related disorders such as hypopituitary dwarfism resulting from abnormalities in growth hormone production, and in stimulating the growth and enhancing feed conversion efficiency of animals raised for meat, milk can egg production.

So Sequence 2192 BP, 486 A; 634 C; 601 G; 471 T; 0 other;

Comparing bequence represents vector parcellage.

The present sequence represents vector parcellage.

Confide encoding GHRH are used in the method of the invention. The apecification describes a method for improving or enhancing.

Confide encoding GHRH are used in the method of the invention. The apecification describes a method for improving or enhancing in an offspring.

Confide and for delaying birth of an offspring. The method comprises introducing a vector, encoding GHRH, into cells of the female animal prior to or during gestation of the offspring under conditions where prior to or during gestation of the offspring under conditions where the mucleotide sequence is expressed. The method is useful of sematoring or enhancing animal growth, for increasing growth hormone, lean body or enhancing animal growth, for increasing growth hormone, lean body mass, IGF-I levels, feed efficiency, growth rate, ratio of somatoring production in an offspring, and for delaying birth of an offspring.

Cother hormone-producing cells in a pituitary gland, and milk production in an offspring, and for delaying birth of an offspring.

CHRH muclei acids and vectors are used for diagnostic purposes in clinical medicine, both human and veterinary, e.g. in treating growth high and enhancing feed conversion efficiency of animals raised for meat, milk and egg production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ä

                                                                                                                                                                                                      A method has been developed of treating urinary incontinence (UI) in mammals. The method comprises delivering a nucleic acid vector for the expression of a growth factor or neurotrophic factor in a tissue or tissues. The present sequence represents the actual lower sequence of plasmid piG052 nucleotides 1-3599 from the present invention. Due to the growth and stimulatory effects of growth factors and neurotrophic factors, introducing these factors to degenerated muscles in the neural improve UI by enhancing both their integrity and neural innervation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GCTGCATTAATGAATCGGCCAACGCGCGGGAGAGCGGGTTTGCGGTATTGGGCGCTCTTC
